FamilyHistoryHosting

Don't be intimidated. We do web hosting for genealogists.

GedSite is the best way to publish your GEDCOM data in HTML format. It has more features and provides more control than any other GEDCOM-based method. If you are serious about publishing your genealogy data on the Web, or if you are sharing your data with family members on thumb-drives or DVDs, you need GedSite!

GedSite is also a great tool to review your data. It is fast, and the HTML format makes the data easy to browse. Many users have reported that it has helped them to find inconsistencies in their data and other problems.

Are you afraid that you don't have what it takes to get a site published? Combine GedSite with **Family History Hosting** (FHH), a web hosting service designed for genealogists. GedSite includes a special one-step publish feature for use by FHH customers. As part of the FHH service, I'll help you register a domain, fine-tune your site, and publish the first version of your site. GedSite and FHH can help you get from offline to online!
