### TMG Utility

TMG Utility is donorware again! After a 1-year hiatus, Maureen, Casey and I are riding again. See the [DonorWare!](#) page.

### Places in Canada

My [Places in Canada](#) site seems popular. Check it out: the lists contain more than 10,000 places with links to online mapping services.

### Stories

Over the years I've written down some memories and some short essays. I decided to [post them here](#) when I realized how long it had been since I had any new [blog](#) entries.

### Books

The [Books](#) section is a pet project that probably doesn't deserve the work it takes to maintain it. I've received a few comments about it, but it isn't a big hit, that's for sure.

### TMG Companion Programs

If you use *The Master Genealogist* (TMG) from [Wholly Genes](#), you should check out my TMG companion programs. They are listed under the heading "Genealogy Programs".

### Music

# Second Site

Second Site is a genealogy web site builder for use with TMG.

**Children's Book Publisher**  
Publish Your Children's Story in Full Color. Sign Up For Free Guide  
[www.childrensbook-publ](http://www.childrensbook-publ)

**Second Site is the best way to publish your TMG data in HTML format.** It has more features and provides more control than any GEDCOM-based method. If you are serious about publishing your TMG data on the Web, or if you are sharing your data with family members on custom CDs, you need Second Site!

**Second Site is also a great tool to review your dataset.** It is fast, and the HTML format makes the data easy to browse. Many users have reported that it has helped them to find inconsistencies in their data and other problems.

**Are you afraid that you don't have what it takes to get a site published?** Combine Second Site with [Family History Hosting](#) (FHH), a web hosting service designed for genealogists. Second Site includes a special one-step publish feature for use by FHH customers. As part of the FHH service, I'll help you register a domain, fine-tune your site, and publish the first version of your site. Second Site and FHH can help you get from offline to online!

## What It Does

Second Site creates web pages from a genealogy database. It generates either narrative or grid style person pages, a master index, a surname index, and source pages. Check out the [partial list of features](#).

## Example Sites

The *best* way to learn what Second Site can do is to review the [sites published by Second Site users](#). You can also review the official [demonstration site](#) or the [Theme and Format Examples](#) page to see some of the variations possible with Second Site.

## Second Site News

**Second Site 3 supports new chart types, slideshows, picture galleries, and more!**

For the announcement of Second Site 3, see [Second Site News #039](#). For information about the most recent release, see [Second Site News #047](#).

## How to Buy Second Site

Second Site 3 is available exclusively from the Family History Hosting web store.

The [full version](#) for new customers is **\$29.95 USD**.

The [upgrade](#) for Second Site 2 customers is **\$9.95 USD**.

## CDs and DVDs

If you have a CD or DVD burner, you can create a CDs or DVDs to share with the members of your family. If they have a computer, the disk is all they need to review the family history you have compiled. See [Publishing Your Site on CD or DVD](#) for instructions.

## Second Site Version 3.4 Released

This release includes two new indented charts, [Descendant \(Indented\)](#) and [Pedigree \(Indented\)](#). Based on the feedback from beta testers and users who commented on early previews, the new charts will be popular. The charts can be expanded or collapsed to show a subset of the tree and that allows the user to focus on the people of interest. You can see an example [descendant chart](#) and an example [pedigree chart](#) on the [Second Site Demonstration](#) site.

Second Site 3 now supports [Web Fonts](#) to expand font-family choices beyond the short-list of fonts that are supported by browsers. This facility must be used with care—Web Fonts have to be downloaded with the pages that used them, and thus they can make pages load slowly—but there are some great ways to use Web Fonts, such as to brand your site by using a distinctive font for the Site Title. The Second Site [demonstration site](#) uses the font "Lobster" for that purpose.

This release also includes other minor enhancements. For a description of the other changes, please see the [Change Log](#).

## Download and Install

All existing [Second Site 3](#) customers should download this *free* upgrade via the [Downloads](#) page. When you install the latest version, you will not lose any SDF files or sites you made with any previous version of Second Site 3.

I strongly recommend that you **uninstall** any previous version of Second Site 3 before you install this version. Previous versions of Second Site 3 include files that are no longer needed; if you install this version into a folder that already contains a previous version, those files will not be removed.

If you install this version of Second Site 3 on a PC that had a previous version of Second Site 3 installed, you will not need your registration information.

## Version 3.4

---

### Enhancements

- Added the **Indented Descendant Chart** and **Indented Pedigree Chart**
- Added support for **Web Fonts** which expands the set of font families you may use on your web pages
- Reimplemented the **Descendant Chart**; this corrects some long-standing limitations like missing spouses in the last generation of the chart and counter-intuitive box placement when optimizing the chart; the **Optimize Space** property now supports three levels of optimization
- Added the **Include Marriage Date** property to the **Descendant** and **Indented Descendant** charts
- Added the **Generation Number** property to all Descendant and Pedigree charts
- Changed the **Person Entry Chart List** to include all instances where a person appears in the chart
- Changed the **Description** property in the User Style sections to an editable field so that users may use the field for notes that describe their custom User Styles
- Added the **Repeat Header Rows** property to the **Edit DNA Group** window of the **DNA Grid User Item**
- Added Header and Footer to the list of content items in the Page Content section of various User Items including the **Custom Page User Item**; like other items in the list such as Extra Sidebar, these properties allow users to add content to a section of the page for the current page only
- Modified the menubar and sidebar; the item for the current page, if any, will be rendered in the highlighted (hover) state

## Changes

- Added the "Use font for Main Page title" checkbox property to the Stylesheets.System.Site Title section; when checked, SS will use the font-family, font-style, and font-weight parameters from the Site Title section for the Page Title on the Main Page; this simplifies the use of a special font-family for the Site Title
- Changed the method Second Site uses to reduce the number of files in the output folder when creating a site that will be published via CD or DVD: Second Site now generates the files directly into the "site" subfolder rather than moving them there after making the site
- Changed the default labels for descendant chart legends from "Female" and "Male" to "Daughter" and "Son"
- Changed the default labels for pedigree chart legends from "Female" and "Male" to "Mother" and "Father"
- Added the **User Item Strings.DNA Kit Name Header** property to enable setting the column header for the kit number/name column in a DNA Grid
- Changed the sort sequence for **Map** Item Lists; the default sort sequence for a set of places from a single Map Events entry is now alphabetic *unless* the Map Events entry uses a connecting line, in which case the items are sorted by the date of the earliest event at the location
- In the surname index, changed regular spaces in surnames to non-breaking spaces
- Changed the **Three Columns Format** to avoid an issue in Firefox where a cell border was not rendered properly

## Fixes

- Fixed a bug where the **Create GENDEX File** feature did not filter the GENDEX.txt file contents properly

### Three Column

The Three Column Format shows the information for a person in three columns. Column one on the left has a label, which is the tag name or a section name. The middle column has the date. (The middle column is omitted for some entries.) The right-hand column has the other information for a tag, which can either be in sentence format (Detail Format=Use Sentence) or a list that includes the place and a list of people involved in the event (Detail Format=Raw Data).

You can modify the borders, background colors, etc., for some interesting effects. The left-hand column is formatted via the "Grid Colum 1" style, the middle column by "Grid Column 2" style, and the right-hand column by "Grid Column 3".
